

# Add-ons

## Sales app

The SDP sales app is a mobile application for managers who would like to stay informed about sales results at any time. This app offers realtime access to all the company's figures on any mobile device.

## Accountancy module

SDP accountancy fits SDP Distripack perfectly. It helps you to follow up on credit limits and calculate purchase invoices beforehand.

## DRM

The Distripack Relationship Management module simplifies project- and task management for sales offers, orders and history.

## Business Objects

SDP Distripack uses Business Objects as a powerful management tool that allows your company to quickly anticipate. You automatically receive reports in your e-mail inbox for further analysis.

## EDI

The SDP Distripack EDI module automates communications with customers and suppliers.

Sending delivery notes and receiving purchase orders will be a piece of cake. This saves you time and money.

## SDP Distripack: software for wholesale businesses

SDP Distripack, the all-in-one solution for the wholesaler, manages articles, lots and stock in different warehouses and depots. The software package automates your purchases and sales, and streamlines deliveries from transport to invoicing.

### Strategic article management

Solid article management is the primary asset for every wholesaler. SDP Distripack divides all articles into main groups, groups and subgroups and you choose the purchase-, sales- and stock units you want to work with. It is also possible to work with various units (e.g., article management in kilograms). Managing and searching for articles using key-words has never been so easy. SDP Distripack brings products together in sets (package with various articles) or assemblages (various processed products). Using lots and serial numbers won't cause difficulties anymore.

### Complete purchase management

SDP Distripack helps you purchase goods and resources efficiently and on time, guaranteeing your business flow. The software provides an overview of reserved and purchased goods and notifies you when a certain article is out of stock. Above all: the package provides you with purchase order proposals and notifications before articles are out of stock. You create your purchase orders (possibly purchase contracts) and send them via e-mail or EDI to your supplier.

### Quick sales transactions

The complete sales flow runs from the order (sales offer or contract), through the warehouse ticket, up to the delivery note and invoice, with links to each step. SDP Distripack helps you reduce administration. The system incorporates the complete document management. Sales offers are easily converted into orders. You create picking lists, delivery notes, invoices, etc.

### Correct price management

SDP Distripack streamlines your company's price management. The package automatically takes into account every price agreement with each customer and calculates sales prices using different methods (FIFO, last price, average price, etc.).

### Optimal stock levels

SDP Distripack also manages your online stock in different warehouses and picking locations. Retrieve and change stock in different pick places, transfer stock, follow the minimum and maximum stock, inventory... all in no time. The integrated mobile handheld scanners make it possible to quickly and easily control deliveries, check warehouse inventory and order picking. Fully supports tracking packagings and empty stock.

### Production process & Lot tracking

SDP Distripack provides the necessary data regarding origin, expiry dates, usage, and destination of a certain lot at any moment in the production process, in line with legal traceability regulations and requirements.

### Connection to automated warehouse

The software program supporting the automated warehouse can be easily integrated with SDP Distripack. This integration option is a major advantage.

### E-commerce

Our integrated e-commerce software makes it very easy to open an online shop. SDP's experienced web developers are ready to develop your webshop. You easily manage its content through a user-friendly management system (CMS). Customers can purchase and pay articles through the online webshop, which links to your article database.
