

Innovative add-ons

Sales app

The SDP sales app is a mobile application for managers who want to stay on top of the sales results at any time and place. This app gives you realtime acces to your company figures on any mobile device.

Website

Our integrated e-commerce software makes it very easy to open an online shop. Let our experienced SDP web developers create a website for you. You manage the content with the user-friendly content management (CMS). Customers can order articles and pay through the online webshop, which links to your article database.

Software for
the furniture store

Software • Hardware • Training • Support • Web Services

- Detailed article management
- Quick sales transactions
- User-friendly cash register
- Correct price management and promotions
- Optimal stock levels
- Strategic purchase management

SDP Robinson: software for your furniture store

SDP Robinson, the all in-one-solution for your furniture store manages articles, lots and stock in the showroom and various warehouses. The software package automates your purchases and sales and streamlines deliveries from transport to invoicing.

User-friendly cash register

Cash registers have user-friendly touchscreens, making them easy to understand for your cashiers. You decide which buttons and functions are available for each register or operator. The attractive customer display shows scanned prices and the amount due, along with other important customer information, like opening hours or closing days. The mobile cash register system gives your cashiers unlimited mobility.

Detailed article management

A solid article management essential for every furniture shop. SDP Robinson divides all articles into main groups, groups and subgroups. You choose the purchase, sales and stock units

you want to work with. You can also work with various units. Managing and searching for articles using various keywords has never been so easy. SDP Robinson brings products together in sets (packages of different articles) or in different combinations. It also supports working with lots.

Quick sales transactions

The complete sales flow runs from the sales order (from offer or contract), through the warehouse ticket, to the delivery note and invoice, with links to each step. The software also provides logistic support for scheduling your deliveries by region or day.

Accurate price management and promotions

SDP Robinson streamlines your company's price management. The package takes all price agreements into account and calculates the perfect sales prices according to the selected method. You also apply discounts based on product category, purchase amount or promotion prices. A loyalty card in your corporate design helps to keep your customers thinking about your company and coming back after their purchase. Issued gift vouchers are easily tracked (number of circulating and expired vouchers).

Optimal stock levels

SDP Robinson also manages your online stock in different warehouses and showrooms. Retrieve and change the stock in different pick places, transfer stock, follow the minimum and maximum stock, do inventories... all do it in no time. The integrated mobile

handheld scanners make it possible to easily and quickly control deliveries, warehouse inventories and article picking. Fully supports tracking the packaging stock.

Strategic purchase management

SDP Robinson helps you to purchase goods efficiently and on time, to guarantee your business flow. You will have an overview of the reserved and purchased goods. The software notifies you when a certain article is out of stock. Above all: the software provides you with order proposals and notifications to inform you which articles are running out of stock. This means you don't miss out on revenue because of sold out products. You create the purchase orders (possibly via sales) and SDP Robinson supports the flow from arrival to delivery to customers.
